OUR GOALS ARE:

1. To help provide access to the most qualified doctors and other health care professionals.
2. To provide information on depression and bipolar illness, particularly about diagnosis and treatment.
3. To provide emotional support to depressive and bipolar people, their families and friends.
4. To educate the public on the biochemical nature of the disorders and their medical treatments.
5. To help eliminate the stigma often associated with these disorders.

We provide the following:

1. Frequent meetings in which participants, in small groups, share experiences, problems and solutions, and offer mutual support.
2. Monthly lectures by doctors and other health care professionals for current information.
3. A telephone service for information.
4. A cutting edge prestigious research magazine 3 times a year.
5. Free literature. A free lending library of CDs and DVDs for use by the membership.
6. Website: <http://www.dbsanewjersey.org> Click on Morristown Area

DEPRESSION & BIPOLAR DISORDER

Bipolar illness is a disorder characterized by extreme mood swings of depression and mania, clinically known as bipolar affective disorder. The illness appears to be caused by a biochemical imbalance in the body and can often be controlled by medication. Some

depressions, called unipolar affective disorders, may also be caused by biochemical imbalance and respond to medication.

A variety of medications are available for treatment. Psychopharmacologists and psychiatrists who are expert in drug therapy should be consulted. For example, Lithium, a natural salt, has been successful in aiding many patients. Psychotherapy or counseling is often useful as well. Many patients have been successfully stabilized on medication and lead normal lives.

SYMPTOMS OF DEPRESSION

4 or more recognizable symptoms that are strikingly different from the person's normal range of feelings and behavior functioning. Depressive symptoms persist for 2 or more weeks and interfere with daily functioning.

- Prolonged sadness or unexplained crying spells
- Significant changes in appetite, sleep patterns
- Increased or persistent irritability, anger, worry, agitation, anxiety
- Overall pessimism or indifference
- Excessive feelings of guilt, worthlessness
- Inability to concentrate, indecisiveness
- Inability to enjoy former interests, social withdrawal
- Unexplained aches, pains
- Recurrent thoughts of death or suicide

SYMPTOMS OF MANIA

A person's mood alternates between mania and depression, with the moodswing lasting for days, weeks or even months. Treatments for depression and bipolar illness are different and consultation with a doctor or qualified mental health professional is recommended if 4 or more of the following symptoms persist to a significant degree, interfering with normal functioning for over 1 week:

- Heightened mood, exaggerated optimism and self confidence
- Decreased need for sleep (less than 3 hours) without fatigue
- Grandiose delusions, inflated sense of self-importance
- Excessive irritability, aggressive behavior
- Increased physical, mental activity

- Racing speech, flight of ideas, impulsiveness
- Poor judgment, easily distracted, difficulty concentrating
- Reckless behavior without concern for consequences, such as spending sprees, rash business decisions, erratic driving, sexual indiscretions
- In severe cases, auditory hallucinations (hearing voices) or delusions (strong convictions about things that aren't true)

Other symptoms are possible; no one symptom determines the disorder. Children often have different presentations.
